sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing. CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only

STSs are identified using ePCR (Genome Res. of a local database that includes entries from local mapping efforts. dbsTs, 7:541-550) searches

Repeats are identified using RepeatMasker (A. Smit and P. Green

unpublished.) for Human and Mouse Bequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht

On May 10, 2003 this sequence version replaced gi:24819573. On May 10, 2003 this sequence version replaced gi:24819573. On May 10, 2003 this sequence version replaced gi:24819573. On May 10, 2003 this sequence version replaced gi:24819573. On May 10, 2003 this sequence reads assembled using Atlas and whole genome shotgun sequence ontigy seaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Liu, J., Liu, W., Liu, Y., London, P., Longacre, S., Lopez, J., Lorensuhewa, L., Loulseged, H., Lozado, R. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  67659

It currently consists of 10 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence will be replaced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Quality coverage: 7.4 in Q20 bases; agarose-fp Quality coverage: 7.7 in Q20 bases; sum-of-contigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Contact: sequence submissions@genome.wi.mit.edu

Direct Submission
Submitted (22-DEC-2001) Whitehead Institute/MIT Center for Genome Research, 30 Charles Street, Cambridge, MA 02141, USA All repeats were identified using RepeatMasker:
Smit, A.F.A. & Green, P. (1996-1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      http://ftp.genome.washington.edu/RM/RepeatMasker.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                be preserved

It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

ω .. RP11-120C2 (UWGC:bc0239) AC121250, RP11-755B10 (UWGC:bc0671) AC114480 4576-bp overlap

Sequence Quality Assessment:
This entry has been annotated with sequence quality
This estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible GenBank flat file format but are available as part of this entry's ASN.1 file. from zero

밁 Ś

all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phr quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest This sequence was finished as follows unless otherwise noted: restriction digest Phred

Sequence Validation:

This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint ance do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AL SUBmitted (09-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 9, 2002 this sequence version replaced gi:23267899.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Shetty, J., Shvartsbeyn, A., Sisson, I., Sitter, C.D., Smajs, D., Sneed, A., Sodergren, E., Song, X.-Z., Sorelle, R., Sosa, J., Steimle, M., Strong, R., Sutton, A., Svatek, A., Tabor, P., Taylor, C., Taylor, T., Thomas, N., Thomas, S., Tingey, A., Trejos, Z., Usmani, K., Valas, R., Vera, V., Villasana, D., Waldron, L., Walker, B., Wang, J., Wang, S., Warren, J., Warren, R., Wei, X., White, F., Williams, G., Willson, R., Wleczyk, R., Wooden, H., Worley, K., Wright, D., Wright, R., Wu, J., Yakub, S., Yen, J., Yoon, L., Yoon, V., Wright, D., Zhou, J., Zhou, X., Zhao, S., Dunn, D., von Niederhausern, A., Weiss, R., Smith, D.R., Holt, R.A., Smith, H.O., Weinstock, G. and Gibbs, R.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    misc_feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  146354
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           12 CCATCTGCAGGGTCCAGGTGATGGATGCCTGTCTTAG 48

Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome

Generation and initial analysis of more than 15,000 full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 24 Row: k Column: 5
This clone was selected for full length sequencing because it passed the following selection criteria: GenomeScan gene prediction, Similarity but not identity to protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Contact: amg@bcm.tmc.edu

                                                                                                                                                                                                                                                                                                                                                                NOTE: This record contains 89 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced.
                                                                                                                                                                                                                                                              will be sequenced to completion. J., Young, G., Zainoun, J., Zembek, L., Zimmer, A. and Zody, M. * NOTE: This record contains 89 individual

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will Submitted (20-DEC-2002) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA On Dec 20, 2002 this sequence version replaced gi:17149550. All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RM/RepeatMasker.html Submitted (29-NOV-2001) Whitehead Institute/MIT Center for Genome Direct Submission Center project name: 3: Contact: sequence_submissions@genome.wi.mit.edu Web site: http://www-seq.wi.mit.edu Center code: WIBR Center: Whitehead Institute/ MIT Center for Genome Research preserved 1148 1248 2349 2449 2449 3512 3512 3612 4747 4847 6031 6131 -- Genome Center 1147: contig 1247: gap of 2348: contig 2448: gap of 3511: contig 3511: contig 4746: contig 4846: gap of 6130: gap of 6130: contig 7390: contig 397_H_13 L19615 f 100 bp g of 1184 bp i f 100 bp g of 1160 bp f 100 bp g of 1063 bp f 100 bp g of 1135 bp g of 1147 bp f 100 bp g of 1101 bp in length in in length in length in length length 43971 44071 45151 45251 46348 46448 47609 47709 48882 50341 50341 51645 51645 30135 30135 30135 31237 31337 32613 32613 33914 33914 33914 33914 33914 33914 33914 33914 33914 33914 33914 34108 36532 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 37702 17562 18751 18751 19913 20013 21200 21300 22463 22463 23721 23721 23721 23821 25006 26266 26266 26266 26266 26266 26262 27629 27629 27629 7391 8578 8678 9938 10038 11193 11293 16235 16335 17462 13819 15003 15103 12455 12555 13719 52828: 52928: 50340: 51544: 51644: 48981 48881 38967 31336 40235 3261 44070 43970 40335 16334 gap of contig gap of contig gap of gap of contig gap of contig gap of contig gap of contig gap of gap of contig gap of contig gap c gap of contig gap of gap of contig gap of contig gap of contig gap gap gap gap gap gap gap of contig gap of contig gap of contig gap of contig gap gap gap contig contig contig contig contig contig of 1259 100 bp of 1204 100 bp of 1184 100 bp 100 bp of 1173 100 bp 100 bp of 1161 of 1157 100 bp 100 bp 100 bp 100 bp of 1170 100 bp of 1194 100 bp of 1160 100 bp of 1163 100 bp 100 bp of 1163 100 bp of 1158 of 1155 100 bp of 1162 100 bp 100 bp of 1179 100 bp of 1224 100 bp of 1201 100 bp of 1102 of 1160 bp in length 100 bp of 1146 bp in length 100 bp of 1185 of 1162 100 bp of 1089 100 bp 100 bp of 1127 100 bp of 1132 100 bp of 1184 100 bp of 1164 of 1260 100 bp 100 bp of 1176. bp 100 bp of 1187 100 bp 100 pp đđ ģ ģ đđ ģ đđ å, ďď ģ ď ď đđ đđ đđ ď ď đđ ģ đđ ď ď ď ď ģ bp in length đq bp in length ď ģ đđ ďq ďq đđ in length in length in 'n 'n 'n 'n ä 'n ij 'n 'n 'n ä ij in length ä in length ij in length ij in length H ä 'n ä ä ij in in length ij חו in length length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence will be replaced
This sequence will be replaced
by the finished sequence as soon as it is available
the accession number will be preserved.

1 629: contig of 629 bp in length
630 729: gap of 100 bp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: This is a 'working draft' sequence. It curreconsists of 10 contigs. Gaps between the contigs are represented as runs of N. The order of the pris believed to be correct as given, however the soft the gaps between them are based on estimates to the soft the gaps between them are based on estimates to the soft the gaps between them are based on estimates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Web site: http://www-seq.wi.mit.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence Quality Assessment:
This entry has been annotated with sequence quality
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will

AL Submitted (20-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Nov 20, 2002 this sequence version replaced gi:23914484. On Nov 20, 2002 this sequence version replaced gi:23914484. On Nov 20, 2002 this sequence version replaced gi:23914484. On Nov 20, 2002 this sequence version replaced gi:23914484. On Nov 20, 2002 this sequence version replaced gi:23914484. On Nov 20, 2002 this sequence years assembled using Atlas and whole genome shotgun sequence contigy reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Submitted (18-APR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 189541)

NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
